

Anémonas del Mediterráneo

C.A.S. AMIGOS DEL BUCEO

A close-up photograph of a sea anemone, likely a species of Anemonia, with long, flowing, orange-brown tentacles. The tentacles are densely packed and have a slightly translucent, gelatinous appearance. The background is dark and out of focus, highlighting the anemone. A diagonal watermark reading "C.A.S. AMIGOS DEL BUCEO" is overlaid across the center of the image.

Actinauge richardi

Actinothoe clavata

Actinothoe sphyrodeta

Adamsia palliata

Adamsia carcinopados

Aiptasiogeton pellucidus

Actinia equina

Actinia cari

Actinia depressa

Actinia flagacea

Actinia schmidtii

Actinia striata

Aiptasia diaphana

Aiptasia mutabilis

Alicia mirabilis

Andria parthenopea

Anemonia sulcata

Anemonia viridis

Anemonactis mazeli

Anthopleura artemisa

Anthopleura ballii

Aulactinia verrucosa

Arachnanthus oligopodus

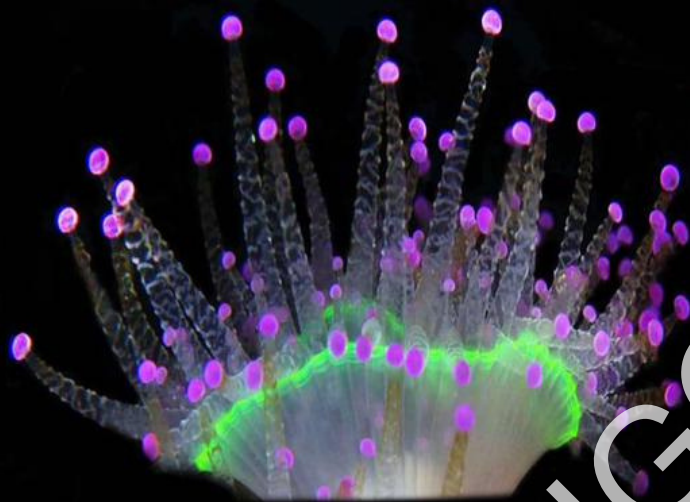

Arachnanthus nocturnus

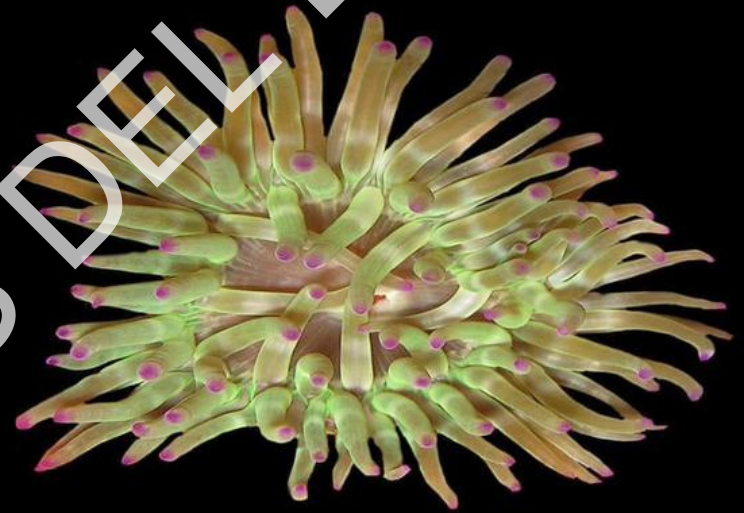

Cerianthus lloydii

Cerianthus membranaceus

Corynactis viridis

Cribrinopsis crassa

Halcampa chrysanthellum

Halcampa cripta

Diadumene cincta

Diadumene lineata

Edwardsia clapedii

Edwardsia timida

Edwardsiella carnea

Gonactinia prolifera

Halcampoides abyssorum

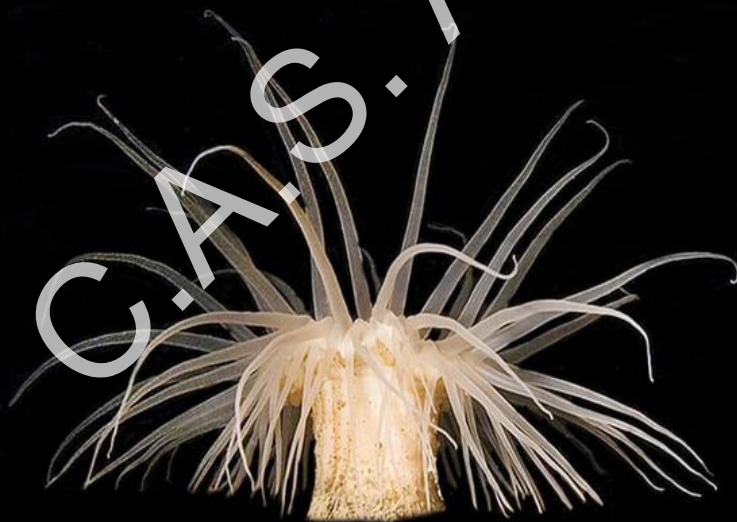

Halcampoides diaphana

Halcampoides purpureus

Hormathia coronata

Hormathia digitata

Masacmaea michelli

Pachyceranthus multiplicatus

Pachyceranthus solitarius

Paractinia striata

Paramonia cinerea

Phymanthus pulcher

Peachia cylindrica

Protanthea simplex

Sagartia elegans

Sagartia troglodytes

Sagartiogeton undatus

Telmatactis cricoides

Telmatactis forskalii
